

Glebar Company

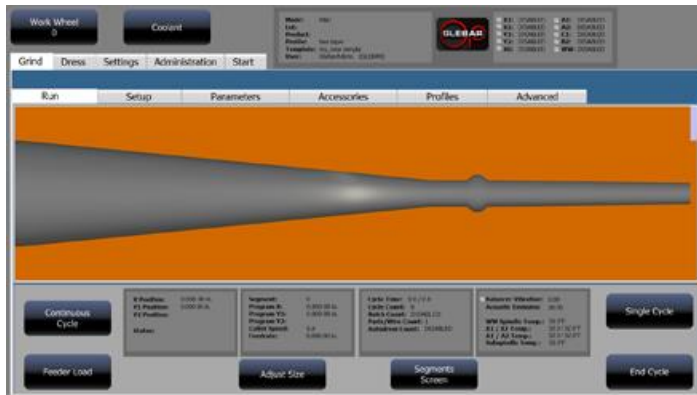

Secure legacy machines by upgrading to Windows 10

incumbent process

- ❑ Machines that run on outdated operating systems such as Windows XP or Windows 7 are more vulnerable to malware, viruses, and other security issues.
- ❑ Microsoft no longer supports previous versions of Windows making it difficult to fix operating system related issues generating more downtime until a solution is found.

challenge

- ❑ Deliver a solution that allows legacy machines to be protected from security threats and allows for easier technical support.

solution – Upgrade machines to Windows 10

- ❑ Glebar can upgrade any of our Windows-based machines to Windows 10.
- ❑ Windows 10 is the newest OS from Microsoft, providing the latest in security protection.

benefits

- ❑ Upgrading reduces the risk of malware, viruses, and other security issues to legacy machines.
- ❑ Avoids downtime caused by problems on unsupported operating systems.
