Automatic wheel dresser improves productivity, eliminates downtime, and improves quality

Glebar Company, Ramsey, NJ, September 14, 2020 --- Dressing the work wheel is an essential process to maintain a true wheel face. It ensures a smooth, consistent grind, improves machine efficiency, and minimizes scrap rates.

Glebar's automatic dresser is available with manual or motorized quill advancement. With motorized quill advancement, it is possible to have a canned dress cycle. Operators can preprogram the frequency of the dress to run after a set number of cycles or time. This allows them to run multiple machines at once increasing their efficiency.

"Operators can initiate the automatic dressing cycle from the HMI leaving them free to perform other tasks," explained Mark Scanel, VP and GM of Glebar Customer Care.

In addition, operators can control the traverse rate producing a more controllable and predictable wheel dress in both the regulating wheel and work wheel. Having greater control improves the surface quality of the part being ground reducing scrap rates and increasing output.

The automatic dresser is available on Glebar's [TF-9DHD Micro Grinder](#) and all [GT-610 Infeed/Thrufeed Centerless Grinding Machines](#).

The Glebar Customer Care team works with customers to minimize downtime and maximize the capabilities of their machines to increase production efficiencies and return on investment. Visit [Glebar Customer Care](#) or call (201) 644-2028.

About Glebar Company

Glebar Company (www.glebar.com) is an innovative, vertically-integrated, process improvement company that designs and configures its standard platform of modular precision centerless grinding machine systems to provide turnkey, custom solutions for its customers. The company focuses on delivering a process to its customers while maximizing customer return on investment. Founded in 1952, Glebar serves companies all over the world, across many market segments including medical, industrial, aerospace, automotive, consumer goods, and mining. Its machines are known for their precision, longevity, flexibility, and efficiency.

Glebar machines are made to the highest quality and safety standards. Every machine is backed by a 24/7 customer service operation which includes a team of technicians, design engineers, and customer service representatives. The company also stocks a stand-by inventory of critical parts and tooling for next-day delivery in the U.S., Europe, and Asia. It employs a dedicated applications team conducting research and development activities, customer process enhancement, and pushing the limits of grinding wheel technology. Glebar is an ISO 9001:2015 Certified Company and is ITAR Registered.

In 2020, Glebar Company expanded its capability and is now offering Electrochemical Grinding (ECG) technology, through the acquisition of ECG leaders Tridex Technology and Everite. Glebar now offers innovative turnkey ECG manufacturing solutions designed to improve cycle times, maintain quality levels, and allow operators to easily set up and run multiple machines.
